DESCRIPTORS *Polyvinyl chloride, Molecular
weight, Viscosity, Determination, Solubility, *Acetone

The molecular weights and the K values of the whole
polymers as a function of their percent soluble in
acetone were plotted on a graph. In this homolog
series of polyvinyl chloride, the percent of soluble
matter decreases with increase in molecular weight.
The ratio expressed in the graph is not universal in the
sense that for a determined molecular weight there is

Different equations are given by various authors to
describe the relations between $[\eta]$ and $\bar{M}_w$ and between
 $[\eta]$ and $\bar{M}_{visc}$ of polyvinyl chloride. Therefore a series
of whole polyvinyl chlorides polymerized in suspension
was investigated, using cyclohexanone as solvent, and
determination was made of $[\eta]$, $\bar{M}_w$ (osmotically) and
 M_v (by light scattering). The osmotic molecular

DESCRIPTORS: *Propenes, Polymers, Polymerization,
Crystal structure

Measurements of the viscosity, osmotic pressure, and
density have been carried out on amorphous and
crystalline polypropylenes. Their solubility in dif-
ferent solvents has been examined. The course of the
molecular weights resulted (sic) congruous with that of
the intrinsic viscosity, independently of the particu-
larity of the structural order of the monomeric unit of
the polymers examined. (Author)
